Summary

I'm a Ph.D. candidate from MIT in computer systems and architecture, looking for full-time technical positions starting around May 2023. I have extensive software development experience in academic and industrial projects involving modeling and software-hardware co-design of deep neural network accelerators. My works have led to significant contributions to open-source industrial code bases, publications/tutorials at top-tier conferences (e.g., MICRO, ISCA), and a US patent application.

Education

Massachusetts Institute of Technology

Ph.D. in Electrical Engineering and Computer Science (GPA: 5.0/5.0)

M.S. in Electrical Engineering and Computer Science (GPA: 5.0/5.0)

Advisors: Prof. Joel Emer (emer@csail.mit.edu) & Vivienne Sze (sze@mit.edu)

Cambridge, MA

Aug. 2017 – present

Feb. 2020

Cornell University

B.S. in Electrical & Computer Engineering (GPA: 4.02/4.3)

Ithaca, NY

May. 2017

Work Experience

- **NVIDIA Computer Architecture Intern** May 2021 - Aug. 2021
 - Investigated the limitations of the existing sparse tensor core accelerator in Ampere GPU.
 - Explored and analytically modeled various approaches to extend the existing sparse tensor core's sparsity support to accelerate more structured sparsity patterns and structured sparsity degrees.
 - Developed pruning and fine-tuning procedures using PyTorch to realize various sparsity structures in attention-based deep neural network models.
 - Filed a patent on a hardware-friendly and novel sparsity structure (US patent application number: 63/236,629).
- **NVIDIA Computer Architecture Intern** May 2020 - Aug. 2020
 - Integrated a Python-based energy estimation backend (developed at MIT) to NVIDIA's deep neural network accelerator modeling infrastructure.
 - Participated in developing various *open-source* design specs to illustrate the flexibility of the integrated framework.
 - Developed a statistical approach to analytically model the energy consumption of various sparse workloads (e.g., pruned deep neural networks) running on sparse tensor accelerators.
 - Implemented the proposed modeling flow in C++ and contributed to a large NVIDIA code base.
- **Goldman Sachs Summer Technology Analyst** June 2016 - Aug. 2016
 - Developed filtering functionalities for querying a database of balanced sheets.
 - Developed a web front-end in JavaScript and HTML to allow user-friendly specification of the filter.

Skills

- C++, Python, PyTorch, MATLAB, C, Verilog, FPGA, HTML, Linux, Git, Docker, Synopsys Design Compiler

Selected Research Experience

- **Software-Hardware Co-design with Novel DNN Sparsity Structures** *Under submission*
 - Proposed a systematic way to define various structured sparsity patterns used in DNN pruning and proposed a new class of structured sparsity patterns to represent a variety of sparsity degrees.
 - Proposed a novel hardware design methodology to support the proposed structured sparsity patterns with light hardware overhead. Characterized the energy and area of important components with synthesized RTL.
 - Developed pruning/fine-tuning procedures using PyTorch to realize the target sparsity structures in various DNNs.
- **Analytical Modeling of Sparse Tensor Accelerators** *ISPASS21, MICRO22, tutorial at ISCA21*
 - Proposed a taxonomy to systematically describe the previously unstructured and confusing design space of sparsity-related hardware optimizations proposed by existing sparse tensor accelerators.
 - Proposed a decoupled methodology to statistically model sparse tensor accelerators by recognizing the orthogonality between several important design aspects.
 - Developed an *open-source* fast, flexible and accurate modeling framework, **Sparseloop**, to enable design space exploration of sparse tensor accelerators. Contributed >40,000 lines of C++ code to an NVIDIA codebase.

- **Flexible Energy and Area Estimation for Accelerator Designs** *ICCAD19, ISPASS20*
 - Proposed a systematic and flexible methodology to describe accelerator architecture organizations.
 - Based on the methodology, developed **Accelergy**, an *open-source* Python-based infrastructure for architecture-level (pre-RTL) energy and area estimation of accelerator designs.
 - Developed several *open-source* prototype energy and area estimation plug-ins for Accelergy to showcase Accelergy's flexibility to understand user-provided, process-dependent data.

Selected Publications and Patent

- **Sparseloop: An Analytical Approach to Sparse Tensor Accelerator Modeling**
Yannan Nellie Wu, Po-An Tsai, Angshuman Parashar, Vivienne Sze, Joel S. Emer
IEEE/ACM International Symposium on Microarchitecture (MICRO), Oct. 2022 (*Distinguished Artifact Award*)
- **Architecture-Level Energy Estimation for Heterogeneous Computing Systems**
Francis Wang, Yannan Nellie Wu, Matthew Woicik, Vivienne Sze, Joel S. Emer
IEEE International Symposium on Performance Analysis of Systems and Software (ISPASS), March 2021
- **Sparseloop: An Analytical, Energy-Focused Design Space Exploration Methodology for Sparse Tensor Accelerators**
Yannan Nellie Wu, Po-An Tsai, Angshuman Parashar, Vivienne Sze, Joel S. Emer
IEEE International Symposium on Performance Analysis of Systems and Software (ISPASS), March 2021
- **An Architecture-Level Energy and Area Estimator for Processing-In-Memory Accelerator Designs**
Yannan Nellie Wu, Vivienne Sze, Joel S. Emer
IEEE International Symposium on Performance Analysis of Systems and Software (ISPASS), April 2020
- **Accelergy: An Architecture-Level Energy Estimation Methodology for Accelerator Designs**
Yannan Nellie Wu, Joel S. Emer, Vivienne Sze
IEEE/ACM International Conference on Computer-Aided Design (ICCAD), Nov. 2019
- **HighLight: Efficient and Flexible DNN Acceleration with Hierarchical Structured Sparsity**
Yannan Nellie Wu, Po-An Tsai, Saurav Muralidharan, Angshuman Parashar, Vivienne Sze, Joel S. Emer
Under submission
- **LoopTree: Enabling Exploration of Fused-layer Dataflow Accelerators**
Michael Gilbert, Yannan Nellie Wu, Angshuman Parashar, Vivienne Sze, Joel S. Emer
Under submission
- **Pruning and Accelerating Neural Networks with Hierarchical Structured Sparsity**
Yannan Wu, Po-An Tsai, Saurav Muralidharan, Joel S. Emer
US Patent Application Number: 63/236,629

Conference Tutorials

- **Sparse Tensor Accelerators: Abstraction and Modeling**
Yannan Nellie Wu with Joel S. Emer, Vivienne Sze, Po-An Tsai, and Angshuman Parashar
International Symposium on Computer Architecture (ISCA), June 2021
- **Tools for Evaluating Deep Neural Network Accelerator Designs**
Yannan Nellie Wu with Joel S. Emer, Vivienne Sze, Angshuman Parashar, and Po-An Tsai
IEEE International Symposium on Performance Analysis of Systems and Software (ISPASS), Aug. 2020
International Symposium on Computer Architecture (ISCA), June 2020
IEEE/ACM International Symposium on Microarchitecture (MICRO), Oct. 2019

Selected Awards

- MICRO22 Distinguished Artifact Award Oct. 2022
Awarded to ONE paper accepted to MICRO22 based on reproducibility of experimental results
- MIT Jacob's Presidential Fellowship Sept. 2017 - May. 2018
- Cornell ECE Early Career Scholarship June. 2014 - Aug. 2014

Selected Courses

- Data Structures and Object-Oriented Programming, Advanced Computer Architecture, Hardware Architecture for Deep Learning, Operating Systems, Embedded Systems, Digital Design Using Microcontrollers, Digital Circuit Design, Graph Analytics, Probabilities
